

TRANSPORT & STORAGE

This sector covers the movement and storage of goods and people, focusing on efficiency, safety, and the integration of smart logistics.

KEY AREAS

Logistics management, transportation services, warehousing, fleet operations, and automated systems.

Popular Careers

Autonomous Vehicle Operator, E-commerce Logistics manager, Logistics and Supply Chain Data Analyst, Smart Warehouse Coordinator, Drone Delivery Specialist.

Skills needed

Planning and organization, problem-solving, tech-savviness, understanding of automated systems, and fleet management.

Why it matters

Efficient transport and storage systems are the backbone of global trade, ensuring timely delivery and supply chain stability.

Future look

The future includes the expansion of autonomous vehicles, drone deliveries, and AI-driven logistics for optimized efficiency.

AUTONOMOUS VEHICLE OPERATOR

An Autonomous Vehicle Operator monitors and ensures the safe operation of self-driving vehicles used in transportation services, taking control if necessary to prevent accidents or manage unexpected road situations.

Working conditions

Typically works in a vehicle on public roads or test sites; often requires long periods of focused attention and strict adherence to safety protocols.

Tasks

Supervises the autonomous vehicle's systems, reports technical issues, logs data, and occasionally drives manually for testing purposes.

Skills

Strong observation skills, organisation, technical -manual skills, knowledge of vehicle mechanics, and an understanding of autonomous driving technology.

Education

High school diploma or equivalent, but technical training or experience in vehicle mechanics, engineering, or driving technology is often preferred

Opportunities

Can work in both public and private sectors, often within tech companies, vehicle manufacturers, and research labs focused on autonomous driving. Possibility to shift into engineering support, data analysis, or safety compliance. Could also become an instructor for new operators or safety specialists in the autonomous vehicle industry..

E-COMMERCE LOGISTICS MANAGER

An E-commerce Logistics Manager oversees the delivery, warehousing, and inventory for online retail, ensuring that products reach customers on time and efficiently.

Working conditions

Work is often split between office environments and warehouses, with frequent coordination across teams for smooth operations

Tasks

Manages inventory, tracks shipments, coordinates with suppliers, optimizes delivery times, and handles logistical issues as they arise

Skills

Manages inventory, tracks shipments, coordinates with suppliers, optimizes delivery times, and handles logistical issues as they arise

Opportunities

Opportunities include working as an employee for large retail companies, managing warehouse operations, or even becoming a freelance logistics consultant for smaller e-commerce startups. With experience, they can shift to supply chain management or higher roles in distribution and international logistics.

Education

Bachelor's degree in logistics, supply chain management, or business is common, though relevant experience can also be valuable
